

2021-2022 Discovery Speaker Series - Tune in to our Facebook live every 1st Thursday of the month for new talks with artists, educators, scientists, and Earth advocates October 2021 - March 2022.

Puget Sound Salmon

December 2nd @ 6:30pm

Tune into the Estuarium's Facebook Live for an eye-opening discussion with Tom Quinn about salmon, their habitat, and their behaviors. Tom Quinn is a Biologist and Professor at UW School of Aquatic and Fishery Sciences. His research focus is in salmon behavior and ecology. Tom has done research on migratory behavior, habitat requirements, and spawning behaviors in salmon and trout. Salmon are born in freshwater, migrate out to the sea to live a large majority of their life in salt water, and then return home to the rivers and streams they were born into to spawn and die. This migratory pattern makes them anadromous fish. Tom's research explores the migratory patterns of these fish populations and the underlying mechanisms that make them possible!

Estuaries are important for salmon!
